INTRODUCTION

This manual was developed to provide training content that addresses the specific 'Unit of Competency' as outlined in the following pages.

We encourage you the student / trainee to take your time when reviewing this content and seek any assistance from your teacher/trainer should you have difficulty in understanding the information.

LEARNING ACTIVITIES

Also included in this Student / Trainee manual are a series of Learning Activities.

The learning activities in the student and/or trainee manuals are 'Form Enabled' so that if the resources are delivered online, the activities can be entered in using the computer keyboard.

Each learning activity is identified with the following icon.

**Learning
Activity**

Learning activities come in the following forms.

- ☆ Questions
- ☆ Research
- ☆ Tasks
- ☆ Interviews

INTRODUCTION—CONT'D

Questions

Questions generally relate to the information presented on previous pages. Questions will also include multiple choice questions, 'Yes' and 'No' questions and/or 'True' and 'False' questions.

Research

This type of learning activity requires you to locate information by using research methods. The research methods could include:

- ☆ Internet searches
- ☆ Reading textbooks and other reference sources
- ☆ Location visits

Tasks

This learning activity type requires you to actually do something and some examples of tasks may include:

- ☆ Creating reports
- ☆ Visiting locations such as workplaces
- ☆ Performing an activity in a workplace

Interviews

This learning activity type would require you to interview person(s) in an actual workplace environment or a person(s) who are experienced in the industry sector which you currently are undergoing training.

You will be made aware of the type of learning activity by noting the learning activity type displayed under the learning activity icon.

INTRODUCTION—CONT'D

USING THE FORM ENABLED FEATURE

If you are using this manual online, you can fill in some of the answers using your computer keyboard.

Your teacher or trainer will provide you with the information and instructions on how to use the 'Form Enabled' feature in this manual.

SELF ASSESSMENT

At the end of each manual is a series of questions that you should review and answer either Yes or No.

The term 'Self Assessment' means you will ask yourself these questions and therefore is no need to provide the answers to the self assessment questions to your teacher or trainer, unless they require you to do so.

This self assessment is to ensure you have reviewed and understood the information that was presented in this manual.

If you answered 'No' to any of these questions or are unsure of your understanding in any of the topics reviewed, you are encouraged to go back and review the information again and/or seek the assistance of your teacher or trainer.

UNIT OF COMPETENCY OVERVIEW

The following pages are extracts from Training.gov.au website and outlines this specific 'Unit of Competency' including the 'Elements' and the 'Performance Criteria'. The content within this manual has been developed to address this unit.

FNSFLT203 - DEVELOP KNOWLEDGE OF DEBT AND CONSUMER CREDIT

| ELEMENT | PERFORMANCE CRITERIA |
|--|--|
| 1. Identify and discuss role of credit in society | 1.1 Identify and discuss concepts and terminology of credit provided by financial institute and debt incurred by borrower 1.2 Identify historical and current role of consumer credit in Australian society and discuss advantages and disadvantages of credit use 1.3 Discuss impact of consumer debt on national economy |
| 2. Identify and discuss range of credit options available | 2.1 Identify and compare types of credit facilities used by businesses 2.2 Identify and compare types of credit facilities used by individuals 2.3 Identify and discuss differences between unsecured and secured loans 2.4 Explain implications of default on secured loans to borrower |
| 3. Identify and compare costs of using credit | 3.1 Compare fees and costs associated with different types of credit options 3.2 Compare features and associated risks of fixed versus variable interest rates 3.3 Identify ways to compare advertised interest rates and effects of fees and charges |
| 4. Identify and discuss effective use of consumer credit | 4.1 Identify and discuss ways to avoid excessive or unmanageable debt 4.2 List strategies to minimise fees on credit 4.3 Discuss importance of meeting minimum payments on credit cards 4.4 Identify and discuss ways to avoid credit card fraud |
| 5. Explain personal credit rating and history | 5.1 Describe role of credit reference agencies 5.2 Explain purpose and use of credit reference reports in assessing loan applications 5.3 Identify and discuss implications of establishing a poor credit history 5.4 Describe methods of obtaining own credit reference report and discuss right to access the report |
| Passing Lane acknowledges that the copyright ownership of the above information is the Commonwealth of Australia and this extract has been provided for reference purposes only. | |

Section One

Identify and Discuss Role of Credit in Society

DEVELOP KNOWLEDGE OF DEBT AND CONSUMER CREDIT

SECTION ONE—IDENTIFY AND DISCUSS ROLE OF CREDIT IN SOCIETY

INTRODUCTION

There would be very few people in Australia that would not have some exposure to debt.

Whether it be a credit card, car loan, even a student loan; many people have some level of debt.

In this training manual we will learn about 'consumer credit', as well as other forms of debt.

SECTION LEARNING OBJECTIVES

At the completion of this section you will learn information relating to:

- ☆ Identifying and discussing concepts and terminology of credit provided by financial institute and debt incurred by borrower
- ☆ Identifying historical and current role of consumer credit in Australian society and discussing advantages and disadvantages of credit use
- ☆ Discussing impact of consumer debt on national economy

IDENTIFY AND DISCUSS CONCEPTS AND TERMINOLOGY OF CREDIT PROVIDED BY FINANCIAL INSTITUTE AND DEBT INCURRED BY BORROWER

The concept of debt is quite simple. - a person (or business) that uses someone else's money to buy something and is then required to pay them back later, has a **'debt'**.

This is called **'borrowing'** money and the person (or business) is called the **'borrower'**. The person (or business) giving the money to the borrower is called the **'lender'**.

The borrower has to pay them back more than they borrowed and this is called **'interest'**. The amount of interest that the borrower pays is called the **'interest rate'**.

The borrower may not be able to return all the money back all at once, so the lender lets the borrower pay it back in smaller amounts over a period of time. This is called making **'payments'**.

The lender may say to a person (or business) that they will give them a specific amount of money that they can borrow at anytime if and when they need it. What the lender has done is offered the person (or business) **'credit'**.

The specific amount of credit made available is call a **'credit limit'**, or **'line of credit'**.

As soon as a person (or business) takes money from the lender's line of credit, they have just incurred a **'debt'** to the lender (also known as the **'creditor'**).

In Australia, offering 'credit' to people and/or businesses is very big business and the companies that offer credit are called **'financial institutions'**.

Financial institutions in Australia need to be registered with the federal government agency called **'Australian Prudential Regulation Authority'**. (also known as APRA).

APRA sets out the laws and regulations on how financial institutions are to offer credit and lend money to people and/or businesses in Australia.

There are a number of terms used by financial institutions and in the following activities we have you do a bit of research and locate some of the more common terminology.

SAMPLE ONLY**Learning
Activity****Task****LEARNING ACTIVITY ONE**

In the financial services industry, the terminology used can be confronting, confusing and there is an enormous number of them.

The Australian Securities and Investment Commission (ASIC) has a website called 'Money Smart'.

They have a 'Glossary' of financial terms and their definitions and this can be found at:

<https://www.moneysmart.gov.au/glossary/>

In this activity we want you to locate the glossary and bookmark it. This will be a very handy reference for you in the future.

IDENTIFY HISTORICAL AND CURRENT ROLE OF CONSUMER CREDIT IN AUSTRALIAN SOCIETY AND DISCUSS ADVANTAGES AND DISADVANTAGES OF CREDIT USE AND DISCUSS IMPACT OF CONSUMER DEBT ON NATIONAL ECONOMY

(Over the next few pages we cover two 'Performance Criteria' points at the same time to avoid repetition)

Consumer credit is 'personal debt' taken on to purchase goods and services. The term is usually used to describe unsecured debt that is taken on to buy everyday goods and services.

Credit cards and most personal loans, are forms of consumer credit. Home mortgage loans are not considered consumer credit as the money is used for an investment into property and the property used as security for the loan.

Consumer credit can be defined in two ways:

- ☆ **Instalment credit** - this is credit used for a specific purpose. The amount of credit provided is a set amount and the payment of the debt is over a set period of time such as monthly payments. This type of credit is usually used to purchase 'big-ticket' items such as cars, furniture, major appliances and so on. The item purchased serves as security in case the consumer defaults on the loan.
- ☆ **Revolving credit** - the most common type of revolving credit is the credit card. There is a set 'credit limit' and this can be renegotiated to be increased. The credit can be used for any type of purchase. The term 'revolving' refers to having the line of credit remaining open and can be used up to the maximum limit repeatedly, as long as the borrower keeps paying a minimum monthly payment.

Generally, credit provided by credit cards is unsecured and this means that the interest rate is higher than most other forms of credit.

Australia has one of the highest level of consumer debt in the world. According to the 'Reserve Bank of Australia', consumer credit in Australia reached \$2913 AUD billion, as of September 2019

To put that in historical perspective, consumer credit in Australia averaged \$913 AUD billion from 1976, until 2019. In 2019 consumer credit reached an all time high of \$2913 AUD billion. (or \$2.9 trillion)

SAMPLE ONLY

SAMPLE ONLY

ADVANTAGES OF CONSUMER CREDIT

The single biggest advantage of consumer credit is the financial flexibility it provides the consumer.

In the past, people and families had to save for months, even years to make major purchases. People and families were also exposed to those unexpected expenses, such as a car breakdown or the refrigerator stops working and this can put significant financial pressure on the people and/or family.

Consumer credit allows consumers to spread out major costs over the course of months, or years, so they do not have to choose between fixing a car and putting food on the table.

The flexibility provided by credit also allows consumers to make timelier investments, such as house repairs, or small improvements. As an example, a house may need urgent roof repairs. Access to credit allows the repairs to be done immediately. Not having the credit available, the repairs could be delayed and more damage would incur.

Although this should not be used as a reason to use credit, consumers can earn substantial benefits by using credit, if they use it wisely.

Many department stores and car dealerships offer customers advantageous financing options, including delayed payments, interest free periods and low interest rates. Many credit cards often reward cardholders with cash-back offers, frequent flier miles and reward points.

For consumers who pay off their credit accounts each month, these rewards amount to free money. A credit card earning frequent flier miles, for example, could end up buying the consumer a free vacation. However, falling behind on the credit card payments will result in higher interest charges than the rewards are worth.

Managing and paying off consumer credit has a positive effect on a person's credit history and credit score.

Financial institutions or other lenders request a credit report that details a consumer's credit history when a consumer needs credit for things such as making general purchases, buying a home, starting a business or purchasing a car. The more responsible you are with credit, the more creditworthy you become.

SAMPLE ONLY

SAMPLE ONLY

DISADVANTAGES OF CONSUMER CREDIT

Access to credit makes it easier to pay for basic needs and cover emergency expenses, but it also simplifies buying expensive products a consumer might want, but not need.

For example, a consumer might walk into a electronics store and see the latest Smart television. Although not needing a new TV, the store offers credit, payment plans and interest free period and this makes the process of buying the TV simple, without the need to use cash.

Psychologists have found that people who paid with credit cards were more impulsive in their purchases.

Psychologists suggest that the credit card shoppers felt less 'pain of payment' than those who paid in cash. Cash shoppers understood they were spending money on a more tangible level and that feeling moderated their spending.

So, the main disadvantage of consumer credit is the tendency to 'overspend'.

The problem with overspending is that it exposes the consumer to a high-interest debt that can cost them a significant amount of money in the long run.

The other disadvantage is the interest rates on consumer credit can be very high and can force consumers to pay back several times the initial value of their purchases.

Not managing consumer credit obligations will result in a bad credit score, making it almost impossible to access credit in the future.

SAMPLE ONLY

Economy

CONSUMER CREDIT AND THE ECONOMY

The economy of any country relies on consumer spending.

This is why some governments do everything they can to encourage consumer spending (and borrowing), including lowering taxes and lowering interest rates. If consumers spend less, the economy is said to have stalled, possibly leading to a longer-term recession.

So consumer credit plays an important part in the Australian economy.

Access to credit leads to an increase in spending, thus increasing income levels in the economy.

However, high consumer debt can negatively affect the health of the economy when it forces consumers to spend less. Consumers start paying down debt, instead of spending.

There is a term called 'household debt'.

This is all the debt that a household may have that includes consumer debt as well as mortgages. High household debt is why an economy begins to falter. Household income may be stretched to the point where paying off the mortgage and the credit cards becomes the priority, far more than spending.

IDENTIFY AND COMPARE TYPES OF CREDIT FACILITIES USED BY BUSINESSES

Businesses require credit facilities for a wide range of reasons and some of those can include:

- ☆ Cover temporary cash flow shortfalls
- ☆ Buy new tools, equipment and/or machinery
- ☆ Buy inventory, or raw materials

It could also include taking out loans to buy facilities in which the business will operate from. Businesses use credit to improve productivity by acquiring new systems, tools or equipment or to expand the business.

We look at the common types of credit facilities that are available to businesses and what they are used for.

- ☆ **Business loan** - this is a fixed amount of money borrowed by the business, for a fixed amount of time and generally paid off in monthly instalments or payments.
- ☆ **Line of credit** - instead of a fixed amount, a financial institution will provide the business a line of credit to a set amount and the business can draw some, or all of it at anytime. The line of credit amount is the amount of what has not been drawn, as well as what payments were made.
- ☆ **Overdraft** - this is an agreed amount that a bank will cover for amounts drawn from the business's transaction account that is over and above what is in the account at the time. As money is deposited into the account, the overdraft amount is reduced. Interest is paid on the amount of the overdraft used.
- ☆ **Factoring** - this is when a business sells their unpaid invoices to a financial institution at a discount to receive immediate cash. When the invoice is paid, the full amount goes to the factoring institution.
- ☆ **Leasing** - many businesses will lease company vehicles, machinery and equipment instead of buying. Most items leased are those that can be replaced with newer models and not suitable for fixed assets.
- ☆ **Hire purchases** - similar to leasing except at the end of the lease term, a 'balloon payment' (final payment) is made and the business then owns the vehicle, equipment or machinery.
- ☆ **Vendor financing** - although this type of credit does not come from a financial institution, it is one of the most used type of credit. Vendor finance (or supplier finance) will supply products or services immediately and expect payment at a later date such 30, 60 or 90 days later.

SAMPLE ONLY**Learning
Activity****Question****LEARNING ACTIVITY ONE**

What are the seven common types of credit facilities businesses could use as outlined in this Section?

SAMPLE ONLY

SAMPLE ONLY**Learning
Activity****Interview****LEARNING ACTIVITY TWO**

In this activity we want you to interview six businesses in your local area. They can be any type of business and it is likely you would need to speak with the owner, or a senior manager.

You may need to make an appointment although you would need only a few minutes of their time. Let them know this interview is for a training activity and appreciate their time. You could get an introduction letter from your teacher or trainer.

Have a list of the previously mentioned credit facilities used by businesses handy.

For each we would like you to ask the following questions:

- ☆ What types of credit facilities do they use (you could list out the types we mentioned earlier)?
- ☆ What type do they think is the most important to them?
- ☆ Could the business survive without any credit facilities?

We have provided areas on the following pages to compile your interview results.

IDENTIFY AND COMPARE TYPES OF CREDIT FACILITIES USED BY INDIVIDUALS

There are a number of credit facilities that can be used by individuals. We go through some of the more common ones below and on the next page:

- ☆ **Personal loans** - a personal loan is generally for a fixed amount used for major purposes. The loan has a fixed interest rate and is paid back in instalments (often monthly payments) over a fixed period of time. This is an 'instalment' type credit facility.
- ☆ **Credit cards** - this is a very common type of credit facility. The credit card issuer establishes a maximum credit limit and the user is allowed to use some, or all of the credit. The issuer also establishes a minimum payment requirement to be paid each month. The user can pay just the minimum, more than the minimum, or pay off the entire amount used. This is a 'revolving credit' type facility.
- ☆ **Rent to buy** - there are retailers that offer products on a rent-to-buy program. A financial institution will provide finance to the retailer who then signs up customers on the program. Basically a customer will 'rent' a product (generally big-ticket items) for an agreed period and at the end of the rental period the customer pays an agreed amount and then owns the product.
- ☆ **In-store finance** - this is where a retailer will offer finance for products they sell in-store. The finance is actually provided by a financial institution and the retailer simply gathers the information from the customer and sends it to the financial institution for approval. Often the retailer in conjunction with the financial institution will offer interest free periods to entice the customer to buy and finance the product.
- ☆ **Buy now pay later** - in recent years 'buy-now-pay-later' finance products have emerged. These are used for buying online and in-store purchases, where the customer will buy the product using 'buy-now-pay-later' finance. The customer then pays four or more equal payments over a very short period of time.
- ☆ **Payday loans** - these are short-term loans that can help a borrower to cover immediate cash needs until they get their next pay. These are small-dollar, high-cost interest loans and payments are typically due within two weeks, or close to the next pay period.
- ☆ **Pawnbrokers** - this is when a customer hands over an item (known as a pawn or pledge) to the 'pawnbroker' who will value it. Then they will provide cash as a loan based on the item's valuation. The customer can redeem the 'pawn' at any time, by paying what was owed and getting the item back. If the customer does not repay the loan during the redemption period, the pawnbroker can sell it to recover the cash.

IDENTIFY AND DISCUSS DIFFERENCES BETWEEN UNSECURED AND SECURED LOANS AND EXPLAIN IMPLICATIONS OF DEFAULT ON SECURED LOANS TO BORROWER

(Over the next few pages we cover two 'Performance Criteria' points at the same time to avoid repetition)

The money borrowed using a credit facility can either be 'secured', or 'unsecured'.

The term 'secured' means that the lender holds some type of security over the amount borrowed; also known as 'collateral'.

The collateral or security held by the lender can be 'seized' and then sold should the borrower fail to pay back the money borrowed from the lender.

For personal loans, such as those to buy a car or other big ticket item, the collateral is generally the item bought with the money borrowed.

In business, the same is true for money borrowed to buy tools, equipment, machinery or vehicles. The tools, equipment, machinery or vehicles become the security for the lender should the business fail to pay back the money borrowed.

In business, overdraft accounts are generally secured using a personal guarantee by a 'Director' of a company or a personal guarantee by the owner of the business. This means that should the overdraft fails to be paid back by the company when required, the owner or a Director is then personally required to pay the lender .

Personal guarantees by a 'Director' of a company or personal guarantees by the owner of a business is a common type of security, especially relevant if the company or the business fails and ceases to trade.

Other types of security that a business may be required to provide can include:

- ☆ Security over inventory
- ☆ Security over future income/invoices
- ☆ Collateral using assets of the business/company

Conversely, unsecured loans are just that. The lender has no collateral or security from the business or the individual for money borrowed. This is often the case with credit cards and 'buy-now-pay-later' lending services.

The only option the lender has is to start debt collection proceedings.

SAMPLE ONLY

SECURED**SAMPLE ONLY**

DEFAULTING ON SECURED LOANS

As we learned on the previous page, loans are secured in a number of ways and they include security over the item(s) purchased using the borrowed money. In business this could involve personal guarantees, or security over company assets.

Having security is there for a reason.

Should the borrower not pay back the money borrowed as agreed to with the lender, then the lender has the right to seize the security/collateral and sell the security/collateral to pay for the money that has not been paid by the borrow (or enforce the personal guarantees).

Not paying back a secured loan is called 'defaulting on the loan'.

The implications on defaulting on secured loans can start with additional fees and interest being added to the outstanding loan amount and this only compounds the problem.

At some point, the lender will demand payment and this generally starts the process of seizing collateral. If personal guarantees were used then demands for payment are directed at the individuals. This can put a significant amount of pressure on personal finances.

Eventually, the lender will seize the security/collateral and sell the security/collateral to pay for the outstanding loan amount.

From both an individual and a business point of view, defaulting on a secured loan also leads to a bad credit score, making it far more difficult to get credit in the future.

The important thing to remember is that it costs money for lenders to try and recoup loan money through selling collateral or assets.

They are more inclined to renegotiate loan terms, extend payments, stop interest and fees being applied, in order to get the borrower back on track and pay off the loan.
